

UVT Light Sabre Mini G - Hand Held Surface Decontamination Device

The UVT Light Sabre is a portable hand-held device designed for decontamination of surfaces and hard to reach areas.

The user slowly passes the device over the contaminated area, allowing the energy from the high output UV-C Emitter to decontaminate all surfaces.

A safety shield prevents direct exposure to UV-C energy.

The UVT Light Sabre is ideal for use in the healthcare sector, commercial, industrial or institutional buildings providing a fast-acting, portable method of surface decontamination, destroying viruses, bacteria, moulds and preventing cross-contamination.

By comparing the UV light output of the lamp to published research regarding the Coronavirus, you can achieve a 99.9% reduction in Coronavirus in under 6 seconds (based on 10 cm distance, covering an A4 area). Use a slow-scanning motion to disinfect equipment and surfaces ensuring potential shadow areas are also exposed.

Applications

UVT Light Sabre applications include:

- Hotels pubs and restaurants
- Retail outlets, salons, nail bars etc
- Food & beverage processing areas
- Residential and commercial mould remediation
- Schools, libraries and homes

The Benefits

- Kills surface micro-organisms that contribute to ill health and the spread of infectious disease
- Leaves no residue and produces no contaminants
- Portable and easy to use – plug and play
- Inexpensive to operate – uses same energy as a 24 W bulb
- Suitable for Healthcare, Corporate and Residential markets
- Industrial strength High Output UV-C lamp
- Proven technology

N.B. Appropriate PPE required when using this device

UVT Light Sabre Mini G - Hand Held Surface Decontamination Device

Technical Information

UV source	1 x 24 W UV-C emitter
Emitter life span	6,000 hours
Wavelength	254 nm
Power	24 W
Power requirements	220 – 240 V (50 – 60 Hz)
Construction material	Stainless Steel 316
Weight	1.8 Kg.
Dimensions	See diagrams
Rating	IP 56
Crash protection	Teflon sheathed emitter (shatter proof)
